(54) VEHICULAR REAR CONFIRMATION DEVICE

(57)Abstract:

PROBLEM TO BE SOLVED: To automatically copy the image of the vehicular rear on a monitor as required by displaying the image of the vehicular rear on the monitor by a display control means when the blur on the rear window is detected using a detecting means.

SOLUTION: When a rear window glass is blur, the blur is removed by making connection of the power source switch 3 of a defogger 6. The state of such motion is transmitted to the microcomputer of a monitor 2 and a camera 1 is actuated by a cable 5, while the image signal is inputted from the cable 4 and displayed on a display screen of the monitor 2 in letters or symbols. By cutting off a switch 9, the vehicular rear image is not displayed on the monitor 2 any more by the action of the microcomputer and the action of the camera 1 is also stopped by the microcomputer of the monitor 2. When the

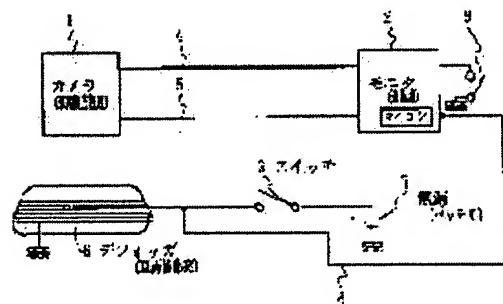

defogger 6 is actuated in such a manner, the image of the vehicular rear is copied on the monitor 2 and it is not necessary for the driver to switchover the image plane.
